- 4. df1 is a data.frame df is a SparkDataFrame
- 5. df is a SparkDataFrame, not a data.frame

I would be interested in scraping some tweets to create regression-trained bots that tweet sporadically. You could have some fun with that.

The idea of scraping classic texts off Project Gutenberg is appealing to me as well, for a similar reason. Create a "monkeys banging on keyboards" effect where you train a model to produce classic literature.
